

Bank Transaction Analysis Report

Customer & Transaction Data | April 2024

Prepared by: Merit Barnabas

Transaction Analysis Overview

This report analyses customer transactions recorded in April 2024 using SQL queries.

The dataset contains 8 customers, Savings and Current account types, and 18 transactions with a total value of ₦138,000.

The analysis includes data retrieval, filtering, sorting, aggregation, grouping, JOIN operations, and subqueries.

Key Insights

1. A total of 18 transactions worth ₦138,000 were recorded, with an average transaction value of ₦7,667.
2. Credit and Debit transactions were almost equal, showing balanced money inflow and outflow in customer accounts.
3. Aisha and Seun recorded the highest transaction totals, making them the bank's most active customers.

Recommendations

1. Offer loyalty rewards or special banking benefits to high-value customers like Aisha and Seun to improve customer retention.
2. Improve customer engagement by sending transaction alerts and personalised financial tips to customers.
3. Encourage customers to use digital banking channels such as mobile apps and online transfers for faster and easier transactions.
